

Step 1: Excel

I download the Sales data set from kaggle's website which was a Excel file and name was Inventory-Tracking I changed the name of the Dataset which is Cleaned_Inventoty-Tracking and saved it. This data was not formatting data , So I have formatted this data in excel.

Here are the steps to formatting, cleaning Dataset:

1. I corrected the space and alignment for the remaining data structures.
2. I checked the Data set that there is no duplicate values.
3. Finally I saved the dataset named Cleand_Inventory-Tracking in excel file.

I formatted and cleaned the dataset using these steps.
